

# INTRODUCING THE GREEN STOP SIGN

Our priority is to encourage sustainability of natural resources: Land, Air, Water, Sun energy, Plants, Trees, Animals, Oceans, Swamps, Lagoons, Ozone Layer, Biological Diversity, Fishes, Birds, and many more. These resources are necessary to keep our health and that of the Earth in balance. Among our many natural resources: global air system, water, and soil are being polluted and destroyed due to our life styles. As a result of these life style choices, we create too much carbon dioxide in the atmosphere, causing harmful radiation, which is affecting the health of our planet. In order to make the public aware of the problem, we have created and adopted the **GREEN STOP SIGN**. This is to be our symbol of awareness and a reminder to promote sustainability of our natural resources. [www.giesseminars.org](http://www.giesseminars.org)

# SUSTAINABILITY

# TOPS

# OUR

# PRIORITIES

**LAND** or soil provides food for humans, animals, plants, birds and feeds most creatures living on our planet. Also, soil filters water and recycles many materials that we use and re-use. **AIR** that goes around our earth contains oxygen, nitrogen, water vapor, and many other important gases we need to survive. **WATER** cleans the atmosphere and the environment as a whole. Humans, plants, and animals drink it. Nobody can live without water. **SUN** energy warms the earth, helps with the germination of most seeds to restore forests; in turn, trees and plants absorb carbon from the atmosphere and release oxygen to support our lives. Trees and plants produce medicine and shelter for us. In life, nobody lives without 'LAWS'; and here, our laws stands for Land, Air, Water, Sun. So, please,

**STOP** the destruction of natural resources. We live on natural resources; destroy them, and we are doomed.
